Purolator's innovative Key Pleat® standard and high capacity filters are the best-performing self-supported pleat (SSP) on the market. Using breakthrough technology and processes by Purolator's R&D team, the Key Pleat achieves a mechanical MERV 8 efficiency, extremely low pressure drop, and industry-leading dust holding capacity.

The Key Pleat possesses the most consistent pleat spacing on the market, achieved with innovative media and a fully automated manufacturing process. The direct adhesion between the media and frame resists movement, bunching, and collapsing during use, supporting a consistent low pressure drop, balanced dust loading, and longer service life.

The robust durability of the Key Pleat filters will save time and money previously wasted on replacing damaged wire-backed filters. With no metal that can warp or deform, moisture-resistant beverage board frame, and rugged synthetic media, the Key Pleat packs a punch and maintains its structural integrity even in wet or humid conditions.

KEY PLEAT HIGH CAPACITY
